

Modern Web Meets Construction: Ins-Bau-Profis PWA 🏗️📱

I'm excited to share my latest project—a high-performance landing page for a German construction firm, built as a Progressive Web App (PWA).

In this project, I went beyond standard web design to focus on:

✅ **PWA Support:** Users can install the site directly to their home screen for an app-like experience. ✅ **Performance:** Lightning-fast load times through asset optimization (WebP) and critical CSS preloading. ✅ **Accessibility & SEO:** 100% semantic HTML and ARIA-compliant code.

By using Vanilla JS and modern web standards, I ensured the platform is lightweight, fast, and accessible to everyone.
